

FREEFLOW HYDRANT STANDPIPE : - A range of polished alloy hydrant riser standpipes generally manufactured to suit both key & bar and ball type below ground hydrant valves common to Western Australia with British Instantaneous discharge couplings and also available with Storz and other State's specific generic couplings.

All Standpipes are available in both fixed / swivel head with single / dual head discharge couplings and are now manufactured with the foot lock nut available in cast alloy or brass with 2 x take-apart bolt join sections for ease of maintenance to remove sand / debris build up.

All locking handles are now manufactured in polished stainless for additional strength where traditionally, cast alloy handles will snap if leverage is applied to secure the standpipe to the hydrant.
