

SPACESAVER SERIES SLIP-ON FIRE CONTROL UNITS :

Portable slip-on style fire units which have been designed and developed to take up minimum space on a vehicle tray to allow for normal operational use of the vehicle whilst continuing to carry fire equipment.

Unlike most versions of portable fire units which have components fitted to a form of metal base frame, **SPACESAVER**'s are manufactured by utilising a uniquely designed and incredibly strong mould-formed **BELLGLASS** fibreglass tank which provides the actual mounting base platform for all the functional components of the fire unit.

SPACESAVER tanks are engineered to support the severe vibration and weight of heavy duty pumpset units which for some special applications have been fitted with diesel engines up to 12hp. Each tank model has fibreglass strengthened base legs for stability support and facilitates tie-down security with 4 x through tray rubber cushioned drop-bolts
